

LYLPS Invasive Species Treatment Plan 2020

Building on the successful pilot treatment program in 2019, we are planning to pursue two treatment regimes in 2020:

- ProcellaCOR will be used to treat additional areas with variable leaf milfoil (VLM) infestations
- We will conduct a pilot program to treat starry stonewort with input from the Starry Stonewort Collaborative
- See the attached treatment maps for target areas
- We are following the same project plan as last year, expanded to include treating two species
- To date we have
 - Reviewed results from 2019
 - Surveyed lake to determine potential future treatment areas
 - Surveyed community to determine support for treatments
 - Distributed RFP to multiple vendors, evaluated bids and selected a vendor
 - Held a preliminary meeting with DEC
- Next steps
 - Present plan to other stakeholders including
 - County committees
 - SWCD board
 - Community
 - Begin fund raising
 - Apply for permits (end of February)
 - Distribute Notice of Intent letter to riparian owners (end of February)
 - Conduct public community meeting (end of March)
- After permits are secured
 - Notify of treatment dates
 - Post signs at impacted areas
 - Monitor treatments
 - Post-treatment testing
 - Post-treatment evaluation
 - Share results
